DETAILED ACTION

The Terminal Disclaimer submitted on 3/02/2006 obviates the rejection of record. The following new rejections are made in view of newly discovered prior art. Accordingly, this rejection is a NON-Final rejection.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 28-40 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-26 of U.S. Patent No.

6,848,715. Although the conflicting claims are not identical, they are not patentably distinct from each other because the sacrificial layer of US 6,846,715 can be SiGe, as required by the present Claims and therefore it would be obvious to one of ordinary skill

in the art to arrive at the presently claimed limitations. See Claims 1 and 4 of US 6,846,715.

Claims 28-55 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-25 of U.S. Patent No. 6,583,015. Although the conflicting claims are not identical, they are not patentably distinct from each other because whereas the present Claims do not require the chemical modification of the SiGe layer, the present Claims do not preclude the chemical modification, and therefore, it would have been obvious for one of ordinary skill in the art to arrive at the presently claimed limitations.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 28-55 are rejected under 35 U.S.C. 102(e) as being anticipated by Fitzgerald et al (US 6,846,715) or Fitzgerald et al (US 6,583,015).

The applied reference has a common inventor with the instant application.
Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art

under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

The cited references disclose providing a strained layer; providing a SiGe layer over the strained layer and selectively removing the strained semiconductor layer, wherein the strained semiconductor layer comprises Si. The references disclose a relaxed semiconductor layer beneath the strained semiconductor layer. The references disclose a dielectric and a thermal oxidation process, and further disclose the formation of a MOSFET device. See fig 2a-2d and column 3, line 50 to column 4, line 30 of Fitzgerald (US 6,846,715); and Figures 4A-4D and column 4, line 50 to column 5, line 15 of Fitzgerald (US 6,583,015).
